How can you provide ultimate security for your organization?

Learn how to provide ultimate security for your organization. You will learn this hands-on at our **Ultimate Security Workshop**. This is one workshop series you wouldn't want to miss!

This hands-on workshop focuses on tactics, techniques, and methodology to provide ISMS and beyond that for your information.

The workshop starts with an overview of ISO 27000 family standards. The workshop progresses to risk management. These often overly complicated methodologies, filled with an excessive number of steps, are simplified in this workshop with an emphasis on the information security objective.

Is this Workshop for you?

If you have been considering **upgrading your knowledge in Information Security implementation, develop your skills in ISMS implementation**, this workshop is for you.

Learn from the Pros on how to analyze the weakness in your information security implementation, assess how it can impact your business if not implemented well, and know how **to secure your information from malicious attacks**.

THIS WORKSHOP IS A ONE DAY TRAINING CURRICULUM THAT PREPARES STUDENTS TO PROTECT THEMSELVES FROM ANY SECURITY INCIDENT.

This workshop is an instructor-led, group-live instruction that includes relevant topics and hands-on practical exercises. Scenario-based practical exercises will be performed. Students will be shown how to use a special security tool and employ techniques to successfully secure their information.

TOPICS

Preparing

- Challenge Treatment

Plan Phase

- **Recognition Stage**
 1. Cognition
 2. Asset Inventory
 3. Process Definition
 4. Network Architecture
 5. Scope Definition
- **Assessment & Analysis Stage**
